Package 'inTrees'

March 12, 2018

Title Interpret Tree Ensembles

Version 1.3

Date 2018-03-10
Imports RRF, arules, gbm, xtable, xgboost, ranger, data.table, methods
Author Houtao Deng. Contributions from Xin Guan, Vadim Khotilovich.
Maintainer Houtao Deng <softwaredeng@gmail.com></softwaredeng@gmail.com>
Description For tree ensembles such as random forests, regularized random forests and gradient boosted trees, this package provides functions for: extracting, measuring and pruning rules; selecting a compact rule set; summarizing rules into a learner; calculating frequent variable interactions; formatting rules in latex code.

2 buildLearner

applyLearner

apply a simplified tree ensemble learner (STEL) to data

Description

```
apply STEL to data and get predictions
```

Usage

```
applyLearner(learner, X)
```

Arguments

learner a matrix with rules ordered by priority

X predictor variable matrix

Value

predictions for the data

See Also

buildLearner

Examples

```
# see function "buildLearner" for examples
# pred <- applyLearner(learner,X)</pre>
```

buildLearner

build a simplified tree ensemble learner (STEL)

Description

Build a simplified tree ensemble learner (STEL). Currently works only for classification problems.

Usage

```
buildLearner(ruleMetric, X, target, minFreq = 0.01)
```

Arguments

ruleMetric a matrix including the conditions, predictions, and and metrics

X predictor variable matrix

target target variable

minFreq minimum frequency of a rule condition in order to be included in STEL.

Value

a matrix including the conditions, prediction, and metrics, ordered by priority.

dataSimulate 3

Author(s)

Houtao Deng

References

Houtao Deng, Interpreting Tree Ensembles with inTrees, technical report, 2014

Examples

```
data(iris)
library(RRF)
X <- iris[,1:(ncol(iris)-1)]</pre>
target <- iris[,"Species"]</pre>
rf <- RRF(X,as.factor(target),ntree=100) # build an ordinary RF</pre>
treeList <- RF2List(rf)</pre>
ruleExec <- extractRules(treeList,X)</pre>
ruleExec <- unique(ruleExec)</pre>
ruleMetric <- getRuleMetric(ruleExec,X,target) # measure rules</pre>
ruleMetric <- pruneRule(ruleMetric,X,target) # prune each rule</pre>
#ruleMetric <- selectRuleRRF(ruleMetric,X,target) # rule selection</pre>
learner <- buildLearner(ruleMetric,X,target)</pre>
pred <- applyLearner(learner,X)</pre>
read <- presentRules(learner,colnames(X)) # more readable format</pre>
# format the rule and metrics as a table in latex code
library(xtable)
print(xtable(read), include.rownames=FALSE)
print(xtable(ruleMetric[1:2,]), include.rownames=FALSE)
```

dataSimulate

Simulate data

Description

Simulate data

Usage

```
dataSimulate(flag = 1, nCol = 20, nRow = 1000)
```

Arguments

flag 1 (default): team optimization; 2: non-linear; 3: linear.

nCol the number of columns in the data set. must >= 2.

nRow the number of rows in the data set.

Value

predictor variable matrix and target variable

4 extractRules

Examples

```
res <- dataSimulate(flag=1)
X <- res$X;
target <- res$target</pre>
```

dicretizeVector

discretize a variable

Description

discretize a variable

Usage

```
dicretizeVector(v, K = 3)
```

Arguments

v vector

K discretize into up to K levels with equal frequency

Value

discretized levels for v

Examples

```
data(iris)
dicretizeVector(iris[,1],3)
```

extractRules

Extract rules from a list of trees

Description

Extract rule conditions from a list of trees. Use functions RF2List/GBM2List to transform RF/GBM objects to list of trees.

Usage

```
extractRules(treeList, X, ntree = 100, maxdepth = 6, random = FALSE, digits = NULL)
```

Arguments

treeList tree list

X predictor variable matrix

ntree conditions are extracted from the first ntree trees

maxdepth conditions are extracted from the top maxdepth levels from each tree

random the max depth for each tree is an integer randomly chosen between 1 and maxdepth

digits digits for rounding

GBM2List 5

Value

a set of rule conditions

Examples

```
library(RRF)
data(iris)
X <- iris[,1:(ncol(iris)-1)]
target <- iris[,"Species"]
rf <- RRF(X,as.factor(target),ntree=100) # build an ordinary RF
treeList <- RF2List(rf)
ruleExec <- extractRules(treeList,X,digits=4) # transform to R-executable rules
ruleExec <- unique(ruleExec)</pre>
```

GBM2List

Transform gbm object to a list of trees

Description

Transform gbm object to a list of trees that can be used for rule condition extraction

Usage

```
GBM2List(gbm1,X)
```

Arguments

gbm1 gbm object

X predictor variable matrix

Value

a list of trees in an inTrees-required format

See Also

RF2List

6 getFreqPattern

```
learner <- buildLearner(ruleMetric, X, target)</pre>
pred <- applyLearner(learner,X)</pre>
readableLearner <- presentRules(learner,colnames(X)) # more readable format</pre>
err <- 1-sum(pred==target)/length(pred);</pre>
```

getFreqPattern

calculate frequent variable interactions

Description

calculate frequent variable interactions

Usage

```
getFreqPattern(ruleMetric, minsup = 0.01, minconf = 0.5, minlen = 1, maxlen = 4)
```

Arguments

ruleMetric a matrix including conditions, predictions, and the metrics

minsup minimum support of conditions in a tree ensemble

minconf minimum confidence of the rules minlen minimum length of the conditions

maxlen max length of the conditions

Value

a matrix including frequent variable interations (in a form of conditions), predictions, length, support, and confidence.

```
library(RRF)
library(arules)
data(iris)
X <- iris[,1:(ncol(iris)-1)]</pre>
target <- iris[,"Species"]</pre>
rf <- RRF(X,as.factor(target),ntree=100) # build an ordinary RF</pre>
treeList <- RF2List(rf)</pre>
ruleExec <- extractRules(treeList,X) # transform to R-executable rules</pre>
ruleMetric <- getRuleMetric(ruleExec,X,target)</pre>
freqPattern <- getFreqPattern(ruleMetric)</pre>
freqPatternMetric <- getRuleMetric(freqPattern, X, target)</pre>
```

getRuleMetric 7

getRuleMetric

Assign outcomes to a conditions, and measure the rules

Description

Assign outcomes to a conditions, and measure the rules

Usage

```
getRuleMetric(ruleExec, X, target)
```

Arguments

ruleExec a set of rule conditions

X predictor variable matrix

target variable

Value

a matrix including the condictions, predictions, and metrics

References

Houtao Deng, Interpreting Tree Ensembles with inTrees, technical report, 2014

Examples

```
library(RRF)
data(iris)
X <- iris[,1:(ncol(iris)-1)]
target <- iris[,"Species"]
rf <- RRF(X,as.factor(target),ntree=100) # build an ordinary RF
treeList <- RF2List(rf)
ruleExec <- extractRules(treeList,X) # transform to R-executable rules
ruleExec <- unique(ruleExec)
ruleMetric <- getRuleMetric(ruleExec,X,target) # measure rules</pre>
```

presentRules

Present a learner using column names instead of X[i,]

Description

Present a learner using column names instead of X[i,]

Usage

```
presentRules(rules, colN, digits)
```

8 pruneRule

Arguments

rules a set of rules

colN a vector including the column names

digits digits for rounding

Value

a matrix including the conditions (with column names), etc.

See Also

buildLearner

Examples

```
# See function "buildLearner"
```

pruneRule

Prune irrevant variable-value pair from a rule condition

Description

Prune irrevant variable-value pair from a rule condition

Usage

```
pruneRule(rules, X, target, maxDecay = 0.05, typeDecay = 2)
```

Arguments

rules A metrix including the rules and metrics

X predictor variable matrix target target variable vector maxDecay threshold of decay

typeDecay 1: relative error; 2: error; default :2

Value

A matrix including the rules each being pruned, and metrics

buildLearner

Ranger2List 9

Examples

```
# see function "buildLearner"
```

Ranger2List

Transform a ranger object to a list of trees

Description

Transform a ranger object to a list of trees

Usage

```
Ranger2List(rf_ranger)
```

Arguments

```
rf_ranger ranger object
```

Value

a list of trees

See Also

Ranger2List

Examples

```
library(ranger)
data(iris)
rf_ranger <- ranger(Species ~ ., data = iris)
tree_list <- Ranger2List(rf_ranger)
X <- iris[,1:(ncol(iris)-1)]
ruleExec <- extractRules(tree_list,X) # transform to R-executable rules</pre>
```

RF2List

Transform a random forest object to a list of trees

Description

Transform a random forest object to a list of trees

Usage

```
RF2List(rf)
```

Arguments

rf

random forest object

10 selectRuleRRF

Value

a list of trees

See Also

RF2List

Examples

```
library(RRF)
data(iris)
X <- iris[,1:(ncol(iris)-1)]
target <- iris[,"Species"]
rf <- RRF(X,as.factor(target),ntree=100) # build an ordinary RF
treeList <- RF2List(rf)
ruleExec <- extractRules(treeList,X) # transform to R-executable rules</pre>
```

selectRuleRRF

select a set of relevant and non-redundant rules

Description

select a set of relevant and non-redundant rules using regularized random forests

Usage

```
selectRuleRRF(ruleMetric, X, target)
```

Arguments

ruleMetric a matrix including the rules and metrics

X predictor variable matrix

target

Value

a matrix including a set of relevant and non-redundant rules, and their metrics

Author(s)

Houtao Deng

See Also

buildLearner

```
# See function "buildLearner:
```

XGB2List 11

XGB2List

Transform an xgboost object to a list of trees

Description

Transform an xgboost object to a list of trees

Usage

```
XGB2List(xgb, X)
```

Arguments

```
xgb xgboost object
X predictor variable matrix
```

Value

a list of trees in an inTrees-required format

See Also

XGB2List

```
library(data.table)
library(xgboost)
# test data set 1: iris
X <- within(iris,rm("Species")); Y <- iris[,"Species"]
X <- within(iris,rm("Species")); Y <- iris[,"Species"]
model_mat <- model.matrix(~. -1, data=X)
xgb <- xgboost(model_mat, label = as.numeric(Y) - 1, nrounds = 20,
objective = "multi:softprob", num_class = 3 )
tree_list <- XGB2List(xgb,model_mat)</pre>
```
